

Mineral Project: SONORA GULCH

Exploration drilling on east side of property returned 6.21 g/t gold across 15.3 metres, open at depth

Summary

Location: Southern Yukon Territory, 110km northwest of Carmacks

Minerals: Gold-bismuth-tellurium-arsenic-antimony veins and bulk tonnage style mineralization

Ownership: Option to earn 80%

Access: By winter road and air

Status: 2006: Completed comprehensive surface geochemistry and geophysics; drilled 12 holes totalling 1,821m

Highlights

- 2006 drilling of Amadeus Zone returned intercept of 6.21 g/t Au across 15.3 m, open at depth, including 12.9 g/t Au across 5.0 m.
- Results of separate 2006 Amadeus Zone hole included intercept of 50.1 g/t silver, with 0.321 g/t gold across 19.9 meters
- Strong correlation between gold and bismuth.
- Detailed, multi-parameter geophysical survey completed over portions of the property.

**Overview**

Located in the Dawson Range gold-copper-silver belt, the Sonora property has undergone previous exploration programs targeting gold vein and porphyry style copper-molybdenum mineralization. In addition, placer gold mines operated on streams draining the Sonora property, recovering angular gold nuggets, tetradymite (a bismuth-tellurium mineral), galena and scheelite.

More recently, Firestone Ventures conducted the first drill program targeting several strong gold +/- copper anomalies and geophysical targets on the east side of the property, most notably the Amadeus Zone. This area had undergone minimal surface exploration by previous operators.

Drilling in 2006 returned an intercept of 6.21 g/t gold across 15.3 meters, including 12.9 g/t gold across 5.0 meters. The newly discovered zone is open at depth. Other drill holes in the Amadeus zone returned strongly anomalous gold and silver values. These results, combined with a favourable geological setting, a strong gold-bismuth correlation and numerous additional regional targets, make Sonora an exceptional exploration target for 2007.

Sonora Gulch Property - Camp & Drilling

The Sonora base camp. Our crew will work through the summer of 2007, conducting surface exploration and drilling.

Setting up the drill. Drilling in 2007 will focus on the Amadeus Zone.
