

Mineral Project: **SONORA GULCH**

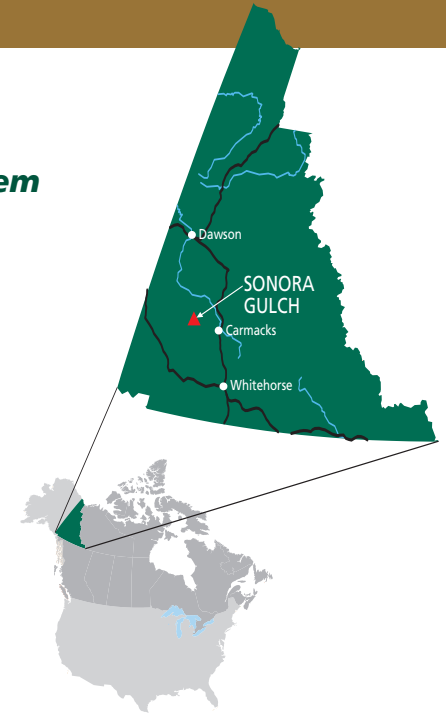

Drilling, trenching and geochemistry on 1 km-long vein system has produced high gold values and strong anomalies

Summary

- Location:** Southern Yukon Territory, 110km northwest of Carmacks
- Minerals:** Gold-bismuth-tellurium-arsenic-antimony veins and bulk tonnage style mineralization
- Ownership:** Option to earn 80%
- Access:** By winter road and air
- Status:** Comprehensive exploration program planned for 2006 including drilling.

Highlights

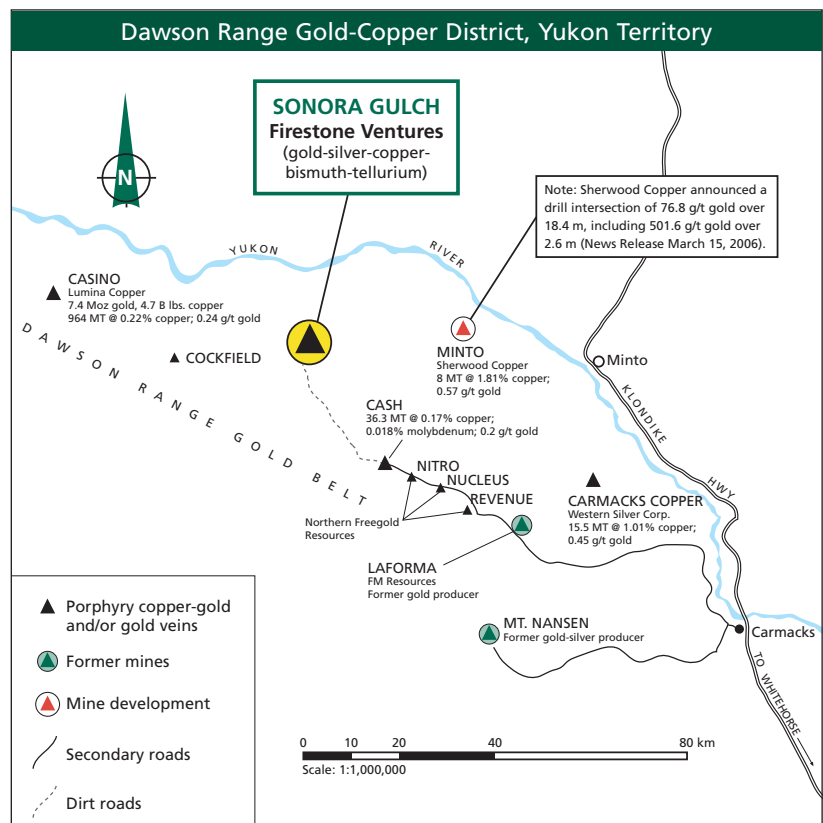

- Geochemical and mineralogical similarities with Teck/Sumitomo Pogo Gold deposit.
- Gold values from drilling up to 18.9 g/t Au over 0.9 m and 5 g/t Ag over 3.0 m.
- Gold values from trenching up to 62 g/t Au over 0.4 m and 3.5 g/t over 3.0 m.
- History of placer mining with angular gold nuggets.
- Detailed, multi-parameter geophysical survey completed over portions of the property.

Overview

Located in the Dawson Range Gold Belt within the Tintina Gold Belt, the Sonora property has long been explored for porphyry copper-molybdenum mineralization and gold veins. A total of 26 drill holes were completed in various programs through the 70s and 80s, mostly at shallow depths.

Since then, new styles of gold mineralization have been identified within the Tintina Gold Belt, including the high grade 5.5 million ounce Pogo gold vein deposit and the bulk tonnage (7.2 million ounces) Ft. Knox deposit near Fairbanks, Alaska. Recent Yukon government geological and geophysical data, combined with previous work done on Sonora, shows several highly prospective gold targets that exhibit geochemistry and mineralogy similar to the Pogo deposit. Combined with the favorable geological setting and reasonable access, the Sonora property represents an outstanding gold target.
